

**To all visitors who work in radiation controlled areas at the KEK Tsukuba Campus**  
**Notice of Change in Operation of Personal Dosimeter**

Feb. 17, 2023, Radiation Control Office

**Subject: All visitor radiation workers (users, contractors, etc.)**

**Start of operation: April 1, 2023**

At the KEK Tsukuba Campus, in compliance with law changes, dosimetry services in accordance with ISO/IEC 17025 will be introduced instead of auxiliary dosimeters for exposure dose measurement. Exposure during radiation work at KEK will be measured with this quality-assured dosimeter.

It is not necessary to bring your personal dosimeter from the affiliated organization to KEK. The necessity of bringing a personal dosimeter from your organization depends on the radiation control method of the affiliated organization, so please follow the instructions of the chief radiation protection supervisor of the affiliated organization.

The measurement results of your exposure dose can be checked on the KEK web pages of individual users and the person in charge. When the measurement result of your exposure dose is updated, you will be notified by email from KEK. Please access the measurement result by yourself.

If necessary, please submit the measurement results of your exposure dose to the radiation control office of the affiliated organization.

For inquiries regarding this matter, please contact

The Radiation Reception
